ABSTRACT: 4327 specimens belonging to the adephagan water beetles were collected by area studies between April-September in 2007-2009 in provinces of Afyon, Denizli, Kütahya and Uşak locate in Inner Western Anatolia of Turkey. As a result of identification of these specimens, 77 species group taxa (72 species and 5 subspecies) of 25 genera of 4 families belong to the order Coleoptera were determined (Gyrinidae: 9 species; Haliplidae: 8 species; Noteridae: 1 species; Dytiscidae: 54 species and 5 subspecies).

KEY WORDS: Aquatic Coleoptera, Fauna, Inner Western Anatolia, Turkey.

Water beetles are important members of many freshwater aquatic ecosystems. Some adephagan aquatic beetles from the region were recorded by Guéorguiev (1981), Wewalka (1989), Fery & Hosseinie (1998), Fery & Petrov (2005) and Kiyak et al. (2006; 2007). This study is a part of PhD thesis research of Darılmaz (2010). In this study, aquatic beetles of the families Gyrinidae, Haliplidae, Noteridae, and Dytiscidae, were sampled in the Afyon, Denizli, Kütahya and Uşak in Western Anatolia in 2007 and 2009.

MATERIAL AND METHODS

Samples were collected from various water bodies with a sieve, a ladle and a net having a mesh size of one millimeter. The specimens were preserved with 70 % alcohol, and in the laboratory they were cleaned off from clayey and muddy substances with a small paintbrush.

The list of localities is shown in Table 1 and Figure 1.
