

**NEW FAMILY AND GENUS NAMES, KIRKAYAKIDAE
NOM. NOV. AND *KIRKAYAKUS* NOM. NOV., FOR THE
MILLIPEDES (DIPLOPODA: CHORDEUMATIDA)**

Hüseyin Özdkmen*

[**Özdikmen, H.** 2008. New family and genus names, Kirkayakidae nom. nov. and *Kirkayakus* nom. nov., for the millipedes (Diplopoda: Chordeumatida). Munis Entomology & Zoology 3 (1): 342-344]

ABSTRACT: A junior homonym was detected amongst the millipedes genus group names and the following replacement name is proposed: *Kirkayakus* nom. nov. for *Altajella* Gulička, 1972. Accordingly, new combination is herein proposed for the species currently included in this genus. *Kirkayakus pallida* (Gulička, 1972) comb. nov. In addition, I propose the replacement name Kirkayakidae new name for the family name Altajellidae.

KEY WORDS: nomenclatural change, homonymy, replacement name, Diplopoda, Altajellidae, *Altajella*.

Remarks on nomenclatural change

The name *Altajella* was proposed by Kulkov (1962) for a brachiopod genus from Altai Mountains (Brachiopoda: Articulata: Spiriferida:). The genus *Altajella* Kulkov, 1962 is not extant. It was assigned to Spiriferida by Sepkoski (2002). It is currently a valid generic name in Brachiopoda (e. g. Doescher, 1981; Sepkoski, 2002; Tapanila, 2007).

The Palaearctic genus *Altajella* was described by Gulička (1972) with the type species *Altajella pallida* Gulička, 1972 by original designation from Altai Mountains in Diplopoda (Chordeumatida: Craspedosomatidea: Neoattractosomatoidea: Altajellidae). The name is currently used as a valid generic name in Diplopoda as the type genus of the family Altajellidae Mikhaljova & Golovatch, 2000. (Shelley et al., 2000; Shelley, 2003; Golovatch & Wytwer, 2003; Sierwald et al., 2006). The family includes four genera as *Altajella* Gulička, 1972; *Elongeuma* Golovatch, 1982; *Tarbagataya* Golovatch & Wytwer, 2003 and *Teleckophoron* Gulicka, 1972.

However, the name *Altajella* Gulička, 1972 is invalid under the rule of homonymy, being a junior homonym of *Altajella* Kulkov, 1962. Under the International Code of Zoological Nomenclature (ICZN 1999) it must be rejected and replaced. In accordance with article 60 of the International Code of Zoological Nomenclature, fourth edition (1999), I propose to substitute the junior homonym *Altajella* Gulička, 1972 for the nomen novum *Kirkayakus*.

As a result of this, *Altajella* Gulička, 1972 is replaced with *Kirkayakus* new name. The following new combination is established: *Kirkayakus pallidus* (Gulička, 1972) new combination.

In addition to this, I herein propose the replacement name Kirkayakidae new name for the family name Altajellidae because its type genus *Altajella* Gulička, 1972 is invalid and the type genus of a family-group name must be valid.

SYSTEMATICS

Order Chordeumatida
Family **Kirkayakidae** new name

Altajellidae Mikhaljova & Golovatch, 2000

Type genus.— *Kirkayakus* new name.

Remarks.—The name *Altajella* has been used in Diplopoda as a stem for a family-group name, and should be automatically replaced with the new name.

Genus **Kirkayakus** new name

Altajella Gulička, 1972, junior homonym of *Altajella* Kulkov, 1962.

Type species.— *Altajella pallida* Gulička, 1972 by original designation.

Etymology.— from the Turkish word “kirkayak” meaning millipede. It is masculine in gender.

Species account and distribution. — Only one species as the type; known from Altai Mountains.

The following new combination is proposed and the species is removed from *Altajella*:

Kirkayakus pallidus (Gulička, 1972) **new combination**

Syn.: *Altajella pallida* Gulička, 1972
